

What makes QUITTPAD® so unique...

The material

QUITTPAD® is made from 3D braided fabric making it different from all others. The 3D braided fabric is a technical textile consisting of a top and bottom layer, held apart at 20 mm by countless pressure-elastic vertically placed polyester fibres. With the right mix of stability and elasticity, they ensure that the saddle is comfortably and evenly supported.

The perfect climate

Because of the open structure of the 3D braided fabric, QUITTPAD® is exceptionally breathable and provides optimum oxygen supply and excellent ventilation under the saddle without accumulation of moisture and heat.

Optimum pressure distribution

This is ensured by the countless individual 100% polyester fibres, precisely down to the square millimetre. This is also the reason why 3D braided fabrics are used successfully in the medical field as an aid in preventing pressure sores.

Best hygienic properties

QUITTPAD® is anti-allergic, antistatic, free of pollutants and resistant to mites and fungi.

QUITTPAD® is very easy to clean and dries quickly.
